

GAMING SUPPORT

Daniel Hanshaw with Gaming Support's Bonus Box™

Gaming Support offers digital sign solutions and targeted bonus prize offerings. Jackpot Junction™ provides real-time, casino-wide communication of jackpots, creating excitement for players. Bonus Box™ allows players to try for special awards such as digital cameras, mp3 players or any prize the casino wishes to offer.

"Since TITO was introduced, there is a perception among players that there aren't as many jackpots," said Daniel Hanshaw, account manager. "Jackpot Junction lets the players know every time a jackpot is hit, showing them just how frequent these awards are."

Tying to progressive controllers and systems, Jackpot Junction receives

jackpot signals and displays the wins throughout the enterprise—on the gaming floor, in restaurants, retail facilities, hotel lobby and even in hotel rooms. This brings people to the floor and ensures your jackpots don't go unnoticed.

Bonus Box allows the operator to select prize offerings for players. A space-age cylinder showcases the prizes beside the machine, promoting play. It is ideally situated for games and areas where current levels of play may be declining or below your floor's average. A percentage of coin-in is attributed to the Bonus Box prize, which is awarded as a mystery bonus. *JW*

think inside the box. We did. All the intelligence of an integrated key management solution can be found right inside KeyWatcher. It controls access to keys with the advanced security provided by access codes, biometrics, magnetic and proximity cards. And locks each key in place with our patented SmartKey system. KeyWatcher also communicates, providing audit trail data, email alerts and system information directly from its integrated control panel or remotely via a networked PC. Plus it's modular, with components like card slots and lockers you can change where and when you need to. And KeyWatcher is fully scalable. Finally a key management system that puts outside the box thinking – right inside the box.
